Thu, 08 Nov 2018 13:28:00 GMT Melting and boiling point Laboratory Guide - static1.buchi.com - The Boiling point of a liquid is an important physical property. A liquid boiling point is the temperature when its vapor pressure is equal to the atmospheric pressure. Normally, the boiling point is measured at one atmosphere (101 kPa or 760 mmHg or 760 torr). Like melting points, boiling points are characteristic properties of pure materials. Sat, 10 Nov 2018 15:21:00 GMT EXPERIMENT 2 (Organic Chemistry I) - The boiling point of a compound is the temperature at which it changes from a liquid to a gas. This is a physical property often used to identify substances or to check the purity of the compound. It is difficult, though, to find a boiling point. Usually, chemists can only obtain a boiling range of a 2 - o 3 C accuracy. This is usually sufficient for most uses of the boiling point. Sat, 06 Oct 2018
