# differential forms with applications to the physical sciences

with Applications to the Physical Sciences - In Chapter 1 we introduce the differential forms in  $\mathbb{R}^n$ . We only assume an elementary knowledge of calculus, and the chapter can be used as a basis for a course on differential forms for "users" of Mathematics. Wed, 31 Oct 2018 06:43:00 GMT Differential Forms and Applications | SpringerLink - is an exact differential if  $M = \hat{A} \nabla f \hat{A} \nabla x$  and  $N = \hat{A} \nabla f \hat{A} \nabla y$  - that is, it corresponds to the differential of a function. The associated differential equation  $M dx + N dy = 0$  is exact if the left side is an exact differential. Solving these exact differential equations uses the equality of mixed derivatives.
