so the only intermolecular attractive forces are London dispersion forces. I. 2. is solid because the electrons in the I. 2. molecule occupy a larger volume and are more polarizable compared to the electrons in the F. 2. molecule. As a result, the dispersion forces are considerably stronger in I. 2. compared to F. 2. AP\* States of Matter & Intermolecular Forces Free Response KEY - Dipole-Dipole Interactions or Dispersion Forces If two molecules are of comparable size and shape, dipole-dipole interactions will likely be the dominating force. If one molecule is much larger than another, dispersion forces will likely determine its physical properties. Chap r 11 In rmolecular Forces - Department of Chemistry -
