In 1982 Kyte and Doolittle firstly suggested a hydrophobicity analysis method of membrane protein sequences [5]. Thereafter von Heijne put forward the well-known "positive-Sat, 03 Nov 2018 18:42:00 GMT Method for Predicting Transmembrane Helices in Protein ... - A transmembrane helix (TMH) topology prediction is becoming a central problem in bioinformatics because the structure of TM proteins is difficult to determine by experimental means. The above prediction scores obtained from a fairly complete testing dataset show that MemBrain is the best TMH predictor to date. Probably the most attractive feature of MemBrain is the improved ability in correctly identifying the ends of TMHs. A Simple Method for Predicting Transmembrane Proteins ... - The increasing protein sequences from the genome project require theoretical methods to predict transmembrane helical segments (TMHs). So far, several prediction methods have been reported, but there are some deficiencies in prediction accuracy and adaptability in these methods.
